25X1 SECRET -2-22 December. At 10:30 a.m., 22 MiG-15s were observed near the runway. Individual flying was practiced by all the planes except for the alert planes from 11 a.m. to 4:30 p.m. The cloud base was at an altitude of 1,000 to 1,500 meters; visibility was about 3,500 meters. 23 and 24 December. There was no flying. The weather was foggy. 25 and 26 December. Air activity was observed. 27 December. At 10 a.m., the engines of some alert planes were started. There was no flying. The weather was foggy, and visibility was about 150 meters. 28 December. The six alert planes were parked near the runway in forest district No 31. At 11:30 a.m., alert plane took off. It landed 25X1 again at 11:40 a.m. Further canvas-covered MiG-15s were parked in front of the flight control station. After 10 a.r., the weather was fair. 29 December and 1 January. There was no flying. The six alert planes were parked near the runway. The weather was hazy. 3 and 4 January. There was no flying. It snowed on both days. 5 Jamuary. At 9 a.m., eight MiG-15s were towed from the flight control station to the parking lot near the runway. Individual flights were made after 12:20 p.n. 1 On 22 December, 25X1 a soldier wiping the interior walls of the air inlets of a MiG-15 with a piece of cloth, which had been dipped into a container. The operation lasted one or two minutes. On 5 January, there appeared to be difficulties in the starting of jet engines. Eight to 10 trucks and sedans shuttled between the light control station and the aircraft parking area. Officers and EM worked on the air inlets of MiG-15s and in the planes. No details could be determined 25X1 about 60 soldiers surrounded the planes. It appeared as if a new procedure for the starting of jet engines was being tested. Contrary to the procedure observed in 1951, when snow was cleared from the runway by soldiers pushing wooden shovels. 25X1 the first snowfalls in late 1952 that a salt-like substance was spread over the runway. On the following day, the snow had disappeared from the runway except for a few small patches. The same substance was spread over the taxiway, no ice had formed on the runway. 25X1 From 18 December to 5 January, snow was cleared from the runway by details from 80 to 300 soldiers using shovels and other tools. A snow plow drawn by two horses was also observed. On 5 January, the runway was completely free of snow. 3

4. In mid-December, 10 or 11 aircraft revetments were completed at the field from Tieckower Weg along the lanes dividing forest districts Nos 21/30 and 22/31. An estimated 10 aircraft revetments were available west of Tieckower Weg in forest district No 39. An undetermined number of shraphelproof aircraft revetments was seen in the southwestern curve of the taxiway. No aircraft were seen in these revetments. Intensive truck traffic at the field indicated that more revetments were under construction at the installation. 4

--3-

- Immediately before alert planes took off at the field, one or two jeeps, each of them occupied by six to eight men who wore either helmets or caps, proceeded to these planes. In light easterly winds, the alert planes were parked in forest district No 30. In strong easterly winds these planes were moved to the place about 40 meters south of the western end of the runway. A red disc was seen in the air apertures of the alert planes. This disc was removed a short time before the planes took off. No flags or break shoes were observed. The alert planes refueled after each landing. A semi--underground low wooden building, 8 x 5 meters, was observed in forest district No 3C. The building was connected to the switchboard by six wires. The low wooden building was erected in early 1952, when the number of alert planes at the field was increased from four to six. Watch dogs were used by the personnel staying at this building. Another such low wooden building was seen 250 meters south of the western end of the runway. It appeared that this building was also guarded by watch dogs. In early November, work on the construction of another low wooden building was started about 200 meters south of the parking area for alert planes in forest district No 31. The building, which measured about 10 x 5 x 4 meters, had no basement.
- Prior to late 1952, guard details of 20 to 30 men were marched or transported from forest district No 40 to the Landesanstalt between 8 and 9 a.m. every day. The soldiers were armed with submachine guns and carried rolled blankets and mess kits. The foxholes for sentries available along the boundaries of the field were seldom used. No stationary guards were seen. The northern boundary of the field was patrolled at irregular intervals. Patrols were also seen on the forest lane between forest districts 20 and 22 and also in forest district No 49. Sentres were occasionally observed between the alert planes and the low wooden building in forest district No 30. The gates on Tieckower Weg were open, probably also at night. No sentries were seen there. About 250 meters northeast of the lane dividing forest districts Nos 49/50 a ditch, 75 cm deep and 100 cm wide, zigzagged along firest districts Nos 40/49 as far as forest districts this ditch was not used by sentries Nos 48/49. guarding the airfield.

25X1

- 7. The switchboard was guarded by four dogs. The radic installation previously located west of the road to Briest been removed to some undetermined place. 6
- 8. In December, the AAA emplacement in the northwestern corner of the field was unoccupied. However, five of six canvas-covered sets, probably 37-mm AA guns, were seen by the side of the emplacement, A semi-underground low wooden building was observed at the emplacement.

	SECRET		25 X 1
	-4,-		
1.	Comment. A fighter regiment equipped with about 24 MiG-15s is stationed at Prandenburg-Briest airfield. Air activity was light during the reported period.	ng	25X1
2.,	Comment. It was previously reported that MiG-15s had starting difficulties even during a relatively slight frost. It is improbable that the wiping of the jet apertures was connected with the starting procedure.	•	25X1
3.	Comment. The spreading of salt is probably done only, when the snow cover on the runway or taxiway is thin, and is designed to preven the formation of ice on the runway.	r t	25X1
4.	Comment. Tieckower Weg runs from Tieckow toward the southeast along the eastern boundary of the field. The aircraft revetments mentiare located south and north of the eastern section of the long runway. According to previous information, such revetments have mainly been by in the southwestern portion of the field.		25X1
5。	Comment. Usually, the alert planes at the field are parked at the eastern end of the long runway. As at other fields, the pilots and tecnical personnel of these planes stay in low wooden buildings in the vinity of the parking lot.	h_	25X1
6.	Comment. This information probably refers to the PKV-45 D/F state which was previously located west of the field. It is believed that the D/F station moved to the vicinity of the other D/F station in the approach are east of the field.	រី.ន	25X1
7.	Comment. It is believed that 6 x 37-mm AA guns are emplaced at t field.	he	25X1
